SZEMÉSZET 1956, 93/2 (65-67) Tables 2

The authors found that the watery extract of the trachomatous follicles and the rinsing liquid produce fibrinolysis. It is especially characteristic, that in cases of trachoma the reaction occurs within 1-2 hr. This proteolytic enzyme belongs to group III of the cathepsins and is formed from the disintegrating lymphoid tissue.

VAJDA, T

17. On the beta-poly-DL-aspartic acid (In German) —
V. Bruckner, T. Vajda, J. Kovács. (*Acta
Chimica Academiae Scientiarum Hungaricae* — Vol. 6,
1955, No. 1—2, pp. 209—217)

Methods for the synthesis of monotonous omega-
polypeptides in the series of naturally occurring alpha-
aminodicarboxylic acids are not known. The significance
of this problem was emphasized by the discovery of
gamma-glutamyl bonds in native D-polyglutamic acid.
Great difficulties were encountered in the attempted
synthesis of the gamma-polyglutamic acid. The prepa-
ration of the beta-polyaspartic acid was however success-
fully effected by the following route. An oxazinedione
derivative was prepared at first by treating alpha-
ethyl-DL-aspartate with phosgene and in the next
stage converting it into ethyl-beta-poly-DL-aspartate
(I). The structure of this compound was confirmed by
degradation. Finally beta-poly-DL-aspartic acid of
4670 average molecular weight was obtained by the
alkaline hydrolysis of the polyester I. The compound
readily dissolved in water and gave positive ninhydrin
and biuret reactions.

dioxane, -70°); after allowing it to stand in vacuo over P_2O_5 for 2 months, the biuret reaction is positive. The treatment of the mixture of II and III with conc. NH_3 results in the formation of isoasparagine, asparagine and I. The heating of II and III in high vacuo at 130° results in the formation of a mixed polyaspartic acid (IV) containing α and β -aspartyl groups. In order to prove the above, IV was converted through the polymethyl ester of IV into a polyanide; the latter was treated with $NaOCl$, and α , β -diaminopropionic acid and acetaldehyde were obtained as the result of Hofmann's degradation

SOURCE: Academia scientiarum hungaricae. Acta chemica, v. 46, no. 3, 1965, 221-228

TOPIC TAGS: organic synthetic process, polycondensation, organic nitrogen compound, amino acid

ABSTRACT: The substance of this paper was published as preliminary communication in Chem. and Ind., 1963, p. 785. The Z-Glu(OtBu)-His-Lys(BOC)-Tyr-OCH₃ protected tetrapeptide was synthesized by the azide-coupling of the dipeptides, which yielded after saponification and catalytic hydrogenation the partially protected initial-peptide suitable for polycondensation. Polycondensation was performed with the aid of dicyclohexylcarbodiimide in dimethylformamide and the protecting groups were subsequently removed by trifluoroacetic acid. The synthesis techniques and the properties of the products were described. The author thanks Miss P. Matejka for experimental assistance; Mrs. J. Kajtar, Mrs. S. Kutassi, Mrs. H. Medzihradszky-Schweiger for analysis; Doctor F. Ruff for the infrared and ultraviolet spectra; and Mrs. H. Torok for the paper electrophoresis. [Orig. art. in Eng.] [JPRS: 34,165]

"Effect of Endogenous Vasoactive Substances on the Coronary Function of Cardiac Output"

Budapest, Acta Physiologica Academiae Scientiarum Hungaricae, Supplement to Vol 22, 1963; pp 7-8.

Abstract [Authors' English summary, modified]: Employing Sapirstein's Rb-86 indicator fractionation method, the effect of certain endogenous vasoactive substances on the coronary fraction of cardiac output has been studied in the rat. Angiotensin II slightly increased the coronary fraction but had no effect on blood flow and resistance. Serotonin creatinine sulfate was effective in the highest dose only. Norepinephrine in smaller doses slightly increased the fraction, the highest dose significantly increased coronary flow and diminished the resistance. Epinephrine increased coronary flow.

Abstract: By an investigation of the forests of Frushka-Gora, and a study of forestry activities in them, the negative role of heavy cuttings in oak forests, especially in plantings with linden and hornbeam, is established. Good growth of the black locust in favorable ecological-soil conditions is noted.

VAJGAND, V. J.

949. Rapid electro-analytical method for the determination of lead as lead dioxide. S. I. Jovanovic and V. J. Vajgand (Chem. Inst., Belgrade, Yugoslavia). *Anal. Chem.* 1955, 27 (8), 335-342. — For the rapid electrolytic determination of Pb as PbO_2 , 0.1 to 0.55 g of metal is dissolved in 20 ml of conc. HNO_3 plus 5 ml of 60 per cent. $HClO_4$ and made up to 170 ml. The soln. is electrolysed at 2.2 V and 1.3 A. at 60° C. for 30 min. The deposit is dried at 120° C. The conversion factor is 0.8614; in the presence of H_2SO_4 the factor is 0.858. The effects of 29 other ions are investigated; comparable amounts of Co, Cr, Na, HPO_4 , Mn, Hg, Bi, As, Mo and TiO_2 affect the results, but small amounts do not.
